EDUCATION

JEPPIAAR ENGINEERING COLLEGE

B.E Computer Science
2018-2022

SKILLS

- Next Js
- React
- Express
- Node Js
- MongoDB
- Python
- Solidity
- Android Development

CERTIFICATION

FULLSTACK DEVELOPMENT

2023 - 2024
Imarticus Learning

ANDROID DEVELOPMENT

2021
Green's Technologies

ABOUT ME

As a skilled MERN Stack and Android developer, I have experience in building dynamic web applications and mobile apps. I've worked on freelance projects in blockchain and Android development, including a real-time salon management app. My focus is on delivering high-quality solutions tailored to client needs.

WORK EXPERIENCE

MERN STACK DEVELOPER

Freelancing/Remote (2023-Present)

As a freelance and remote MERN Stack Developer, I have successfully completed various projects, building dynamic web applications using MongoDB, Express.js, React.js, and Node.js. I specialize in developing responsive user interfaces, implementing RESTful APIs, and managing secure database operations. My experience includes creating user authentication systems with JWT and OAuth, ensuring data security and smooth performance. I work closely with clients to understand their requirements, providing tailored solutions and regular updates. My ability to work independently, manage time efficiently, and deliver high-quality results has built my reputation as a reliable and skilled developer.

BLOCKCHAIN DEVELOPER

Freelancing (2022-2023)

As a blockchain freelancer for a short period, I worked on projects involving smart contract development and integration with decentralized applications (DApps). I gained experience using Solidity for creating secure smart contracts and integrated them with MetaMask in Web3 projects. These freelance projects helped me understand blockchain fundamentals and how to connect smart contracts with front-end applications efficiently.

ANDROID DEVELOPER

Freelancing (2022)

As a freelance Android developer, I worked on various projects, including a real-time salon management app. This app featured OTT and e-commerce functionalities, allowing salon owners to manage in-app purchases and product listings. Additionally, I created a custom admin interface for video uploads, user interactions, and sales tracking. These projects helped me gain valuable experience in Android app development during my freelance work.
